

Additional Information About US

Our cost estimates includes a two million dollar general liability insurance policy in effect on your site, (we can name your company as co-insured at your request) protecting your company and/or the building owner from liability while our crew is on-site as well as workers compensation insurance, commercial auto insurance, etc.

We bring a "rolling laboratory" of 50 (plus) pigment colors to the site, develop customized color formulae and techniques for the situation and create a test area for approval. Upon approval of the test area we will "expand" the test area over the remainder of the agreed upon area(s), and then present the finished work for final approval.

Our process has been accepted as a repair by the U.S. Postal System (for buildings in Illinois and Kentucky), the Pennsylvania Turnpike Commission (for three buildings on the turnpike), the State University of New York (the entire medical building at the Buffalo, New York campus), University of Notre Dame, Michigan State University, Ohio State University (The Frye Hall addition), also Ohio State University (the Student Administration Services building in conjunction with George Acock & Associates), Sam's Club, Wal-Mart, Lowes, Home Depot, Applebee's restaurants, Bob Evans restaurants, Honda of America (Marysville, Ohio motorcycle division), the U.S. Army (Fort Knox) base in Kentucky and the U.S. Army Proving Grounds in Aberdeen, Maryland to name just a few.

We have been color correcting masonry for over 28 years and believe you will be satisfied with our results. Thank you for your consideration.

Sincerely,

Rick Conner
President
Masonry Cosmetics Inc.
